Response to Remarks

- 1. Applicant's Reconsideration filed on June 20, 2003 (paper 8) has been fully considered. A newly found prior art which teaches the following claimed features in a better form than the cited prior art of Kajiyama is applied as follows:
- (a) TOC table having time information such as minutes and seconds are based on a "one time unit" which is the time unit "second"; and
- (b) the start time is the absolute time of each program as illustrated in Fig. 14.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. § 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless - (e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

3. Claims 5-9 are rejected under 35 U.S.C. § 102(e) as being anticipated by Kondo et al. (U.S. Patent 5,982,727).

09/509,108 AU 2653

Kondo teaches a method for playing a recording medium in a player 1 having all of the steps as recited in claims 5-9. For example, Kondo teaches the following:

- (a) as in claim 5, the recording medium 7 having a run-in area and at least one address area stored in the run-in area (Figs. 3 and 7; lead-in area is the claimed run-in area; address area in the lead-in area is recorded as the absolute time; column 1, lines 23-25);
- (b) as in claim 5, the at least one address area containing at least one address of a beginning of a title stored on the recording medium in the form of a combination of multiple time units (Fig. 14; column 1, lines 25 and 26; a time unit is expressed in form of a second);
- (c) as in claim 5, the player 1 having a read device 43 and a memory (Figs. 1 and 3; controller 2 and CPU 45 each contains an internal memory as a buffer);
- (d) as in claim 5, the at least one address area is read out, converting the at least one address of the beginning of the title to a start time in the form of exactly one time unit (Fig. 3; column 4, lines 63-65);
- (e) as in claim 5, the start time substantially corresponding to a playing time of the recording medium from a beginning of a program area to a beginning of an addressed title (Fig. 3; column 7, lines 65-67; column 8, lines 1-22);

AU 2653

as in claim 5, storing the start time in the memory (Fig. 3; TOC table containing each program's absolute time is read and stored for determining the program's position/time period);

- as in claim 5, calculating a track jump time (access time), for positioning the read device at the beginning of the title, directly from at least one corresponding start time stored in the memory (Figs. 3 and 14; recording a program requires the calculation of the read head's access time/position);
- as in claim 6, the recording medium 7 includes an optical storage disc (Fig. 3);
- (i) as in claim 7, if a pause is detected at the beginning of the title, determining a pause duration and adding the pause duration to the start time (Fig. 14; reading the TOC table can be considered as a pause before searching a program);
- (j) as in claim 8, selecting the time unit depending on an accuracy needed for calculating the track jump (Fig. 14; a time unit such as minute/second is required during a program search); and
- as in claim 9, the time unit is one second (Fig. 14; TOC time can be expressed in second).
